EPRO report

Import log file

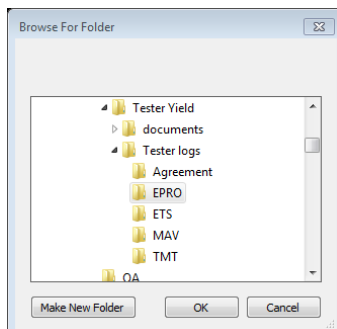

To select log files for generate report. Program provides 2 ways to import file is by “Folder” and “File”. For folder user can either browse folder or drag drop folder to program. For file program support single or multiple file, user can drag and drop file to program.

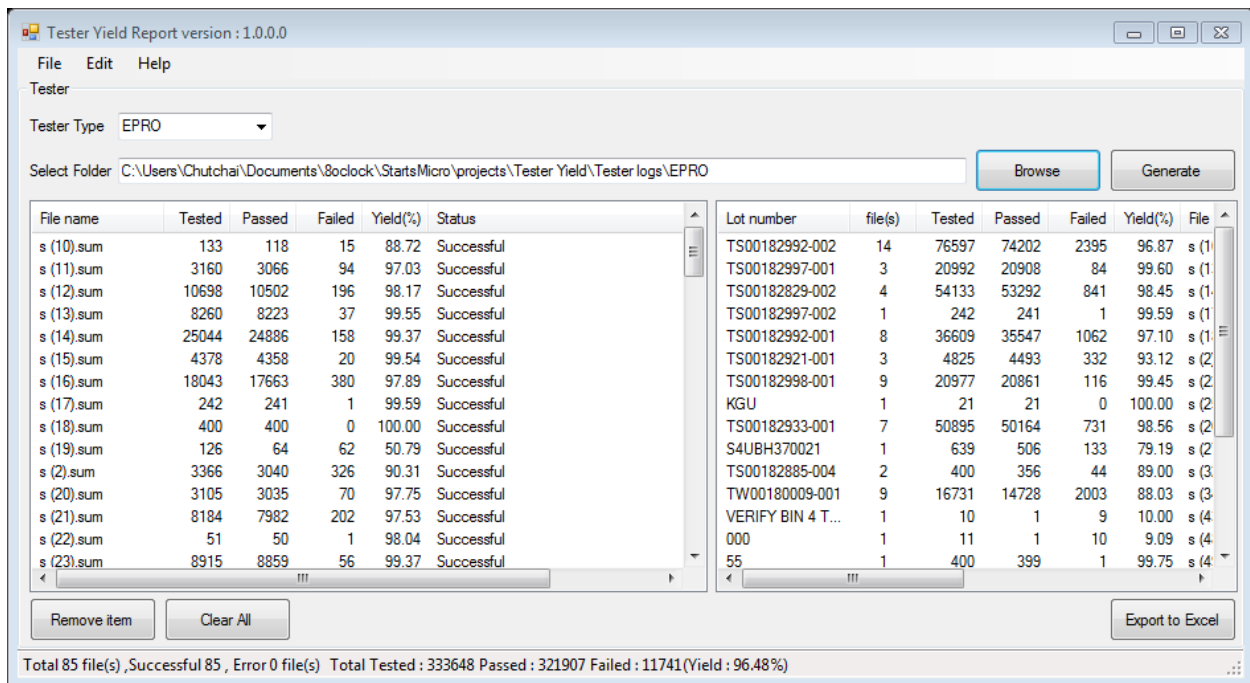

By folder

Click “Browse” then select report folder then program will import and generate report immediately. Or user can typing full path of report folder and click “Generate” button.

Select report folder

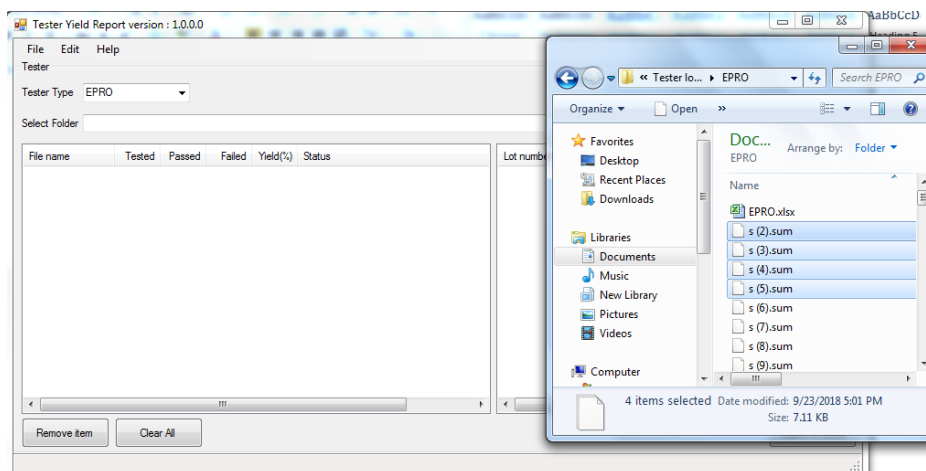

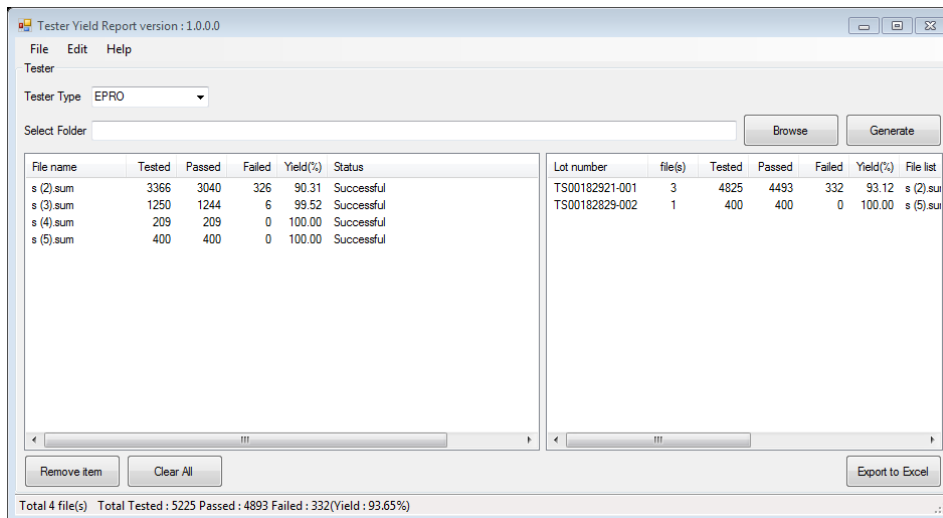

After select report program will generate yield report.

You also can drag and drop your folder in to file list box then system will generate report same as manual select folder.

By Multiple/Single files

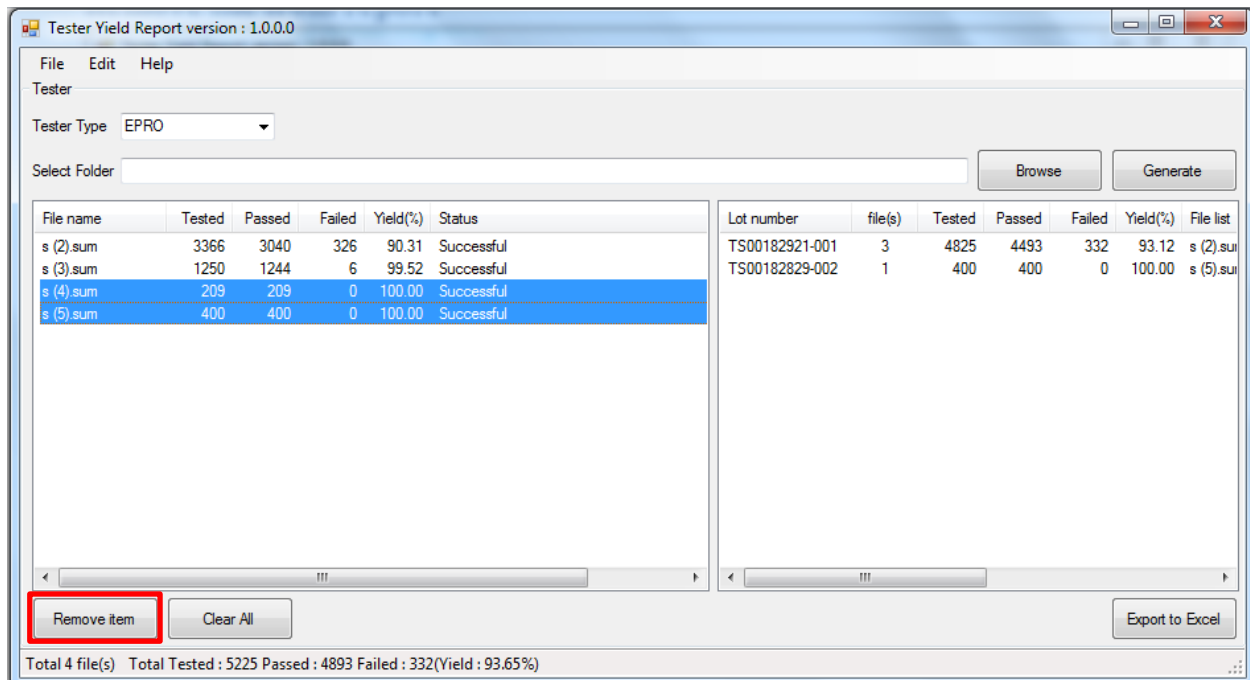

You can drag and drop files to file list box (on left). Program will process once file are dropped.

Remove file from report

Select file (single or multiple) on file list box then click “Remove item” then selected file item will be removed and program will refresh data on Lot information report on right.

“Clear all” will remove all files items.

Export to Excel

To generate and export to excel file, click on “Export to Excel” button then program will generate summary report and open report in excel format.
